DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 12, in part, drawn to kits comprising probes and primers for P. aeruginosa.

Group II, claim(s) 12, in part, drawn to kits comprising probes and primers for E. coli.

Group III, claim(s) 12, in part, drawn to kits comprising probes and primers for Salmonella.

Group IV, claim(s) 12, in part, drawn to kits comprising probes and primers for bacteria.

Group V, claim(s) 12, in part, drawn to kits comprising probes and primers for enterobacteriaceae.

Group VI, claim(s) 12, in part, drawn to kits comprising probes and primers for enterobacteriaceae (16S rRNA).

Group VII, claim(s) 13, in part, drawn to methods for the detection of P. aeruginosa.

Group VIII, claim(s) 13, in part, drawn to methods for the detection of E. coli.

Group IX, claim(s) 13, in part, drawn to methods for the detection of salmonella.

Group X, claim(s) 13, in part, drawn to methods for the detection of bacteria.

Group XI, claim(s) 13, in part, drawn to methods for the detection of enterobacteriaceae.

Group XII, claim(s) 13, in part, drawn to methods for the detection of enterobacteriaceae (16S rRNA).

Group XIII, claim(s) 15-23, drawn to kits comprising probes and primers for S. aureus.

Group XIV, claim(s) 24-25, drawn to methods for the detection of S. aureus.

Application/Control Number: 09/700,148

Art Unit: 1634

2. The inventions listed as Groups I-XIV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The feature that joins the named inventions is the fact that they comprise or utilize probes and primers for the detection of bacteria. However, such a feature is not a special technical feature in view of the prior art, since the prior art provides kits and methods which comprise and utilize probes and primers for the detection of bacterial species. For example. Matsunaga et al. (US 5702895) provide a kit comprising nucleic acid primers for the detection of S. aureus, and methods for using these kits (see abstract and claims). Thus, the technical feature that joins these groups is not a "special technical feature" in accord with the PCT rules.

In light of the fact that there is no special technical feature which joins all of the claims, the claims have been divided into groups according to the organism whose genome the particular probes and primers are designed to hybridize to and according to the organism that is being detected in the recited methods.

- 3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
- 4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Application/Control Number: 09/700,148
